

ABSTRACT

The invention features methods of treating allergic asthma by administering to a subject a chimeric polypeptide that comprises a first polypeptide domain comprising at least one moiety
5 that specifically binds to a chemokine receptor; and, a second polypeptide domain comprising at least one of (a)-(d): (a) a moiety that binds to a T cell surface polypeptide, (b) a moiety that binds to a dendritic cell surface polypeptide, (c) a moiety that binds to a cell toxin, and (d) a cell toxin.
